Upon review of the claims in the application and the prior art cited therein, the finality of the last office action has been withdrawn, and the following action has been taken. While the reference utilized is the same as previously used, the elements therein that have been relied upon to meet the limitations of the claims are different to some extent as set forth in the following rejection.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Ball.

Figures 6,8,29,32 and 42 show structure as claimed, including a U-shaped member 111 which is pivotable about its ends, and having a central section to which is attached a guide plate 60. The guide plate 60 is secured to the central section through “knuckle” 113, and includes a wall with a pair of guide slots 99 (see fig. 32) which extend generally perpendicular to the U-shaped member 111.

Claim 5 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
